

## CHAPTER 5.3

Classification

# THE BINOMIAL SYSTEM

Binomial nomenclature = two-term namingsystem

Bi (Latin = two)

nomial (Latin = name)

# CARL LINNAEUS

- in 1735
- observed wildlife a lot
- classified over 12000 different organisms
- in botany and zoology L. used to indicate him as the authority of a species' name

# BINOMIAL SYSTEM

Always follows *Genus species* format

**Genus** : a group of species that share common characteristics but may not be able to interbreed.

**Species** : a group of organisms in the same genus that are able to interbreed to produce fertile offspring.

# RULES

- Genus name starts with a capital letter.
- Species name starts with a lowercase letter.
- Genus name always written before species name.
- The complete name, i.e. genus and species, should be word processed in italics , or underlined when handwritten.
- Often Latin or classical Greek → unchanging languages

# BINOMIAL NOMENCLATURE: EXAMPLES

*Pongo pygmaeus*

(Bornean orangutan)

*Bradypus variegatus*

(Brown-throated sloth)

*Megaptera novaeangliae*

(Humpback whale)

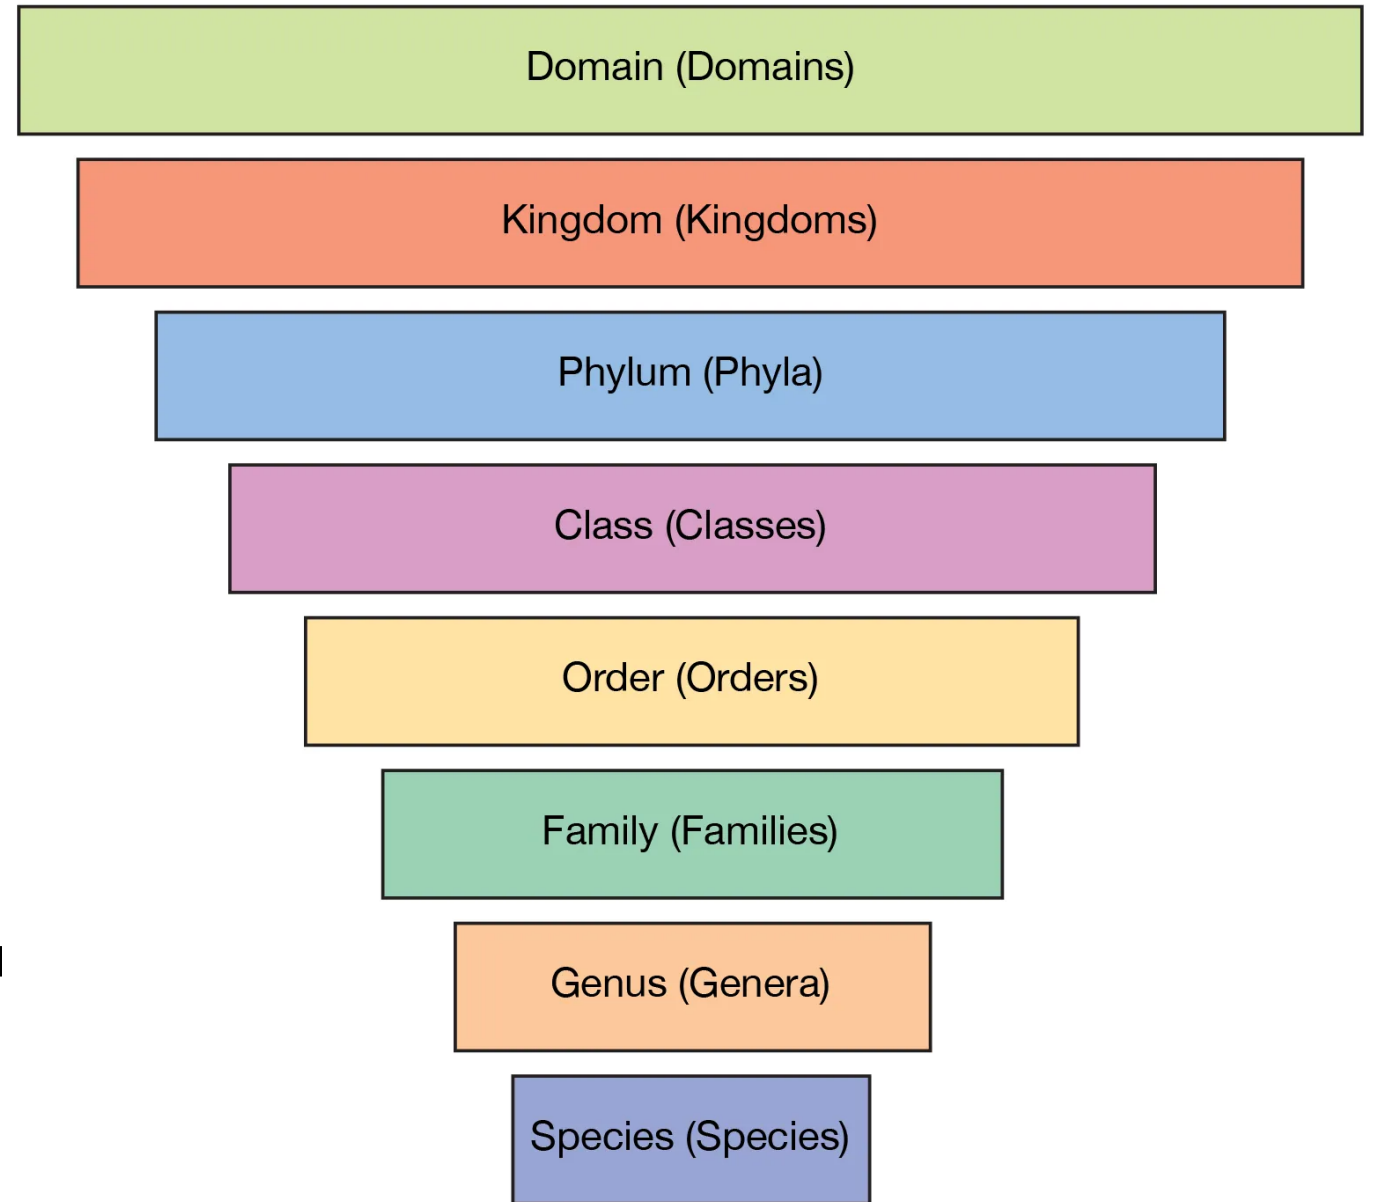

# TAXONOMY

Taxis (Greek = arrangement)

Nomos (Greek = law)

→ taxonomy =

practice and science of categorization  
or classification

# TAXONOMY — MNEMONIC?

**D**omain

**K**ingdom

**P**hylum

**C**lass

**O**der

**F**amily

**G**enus

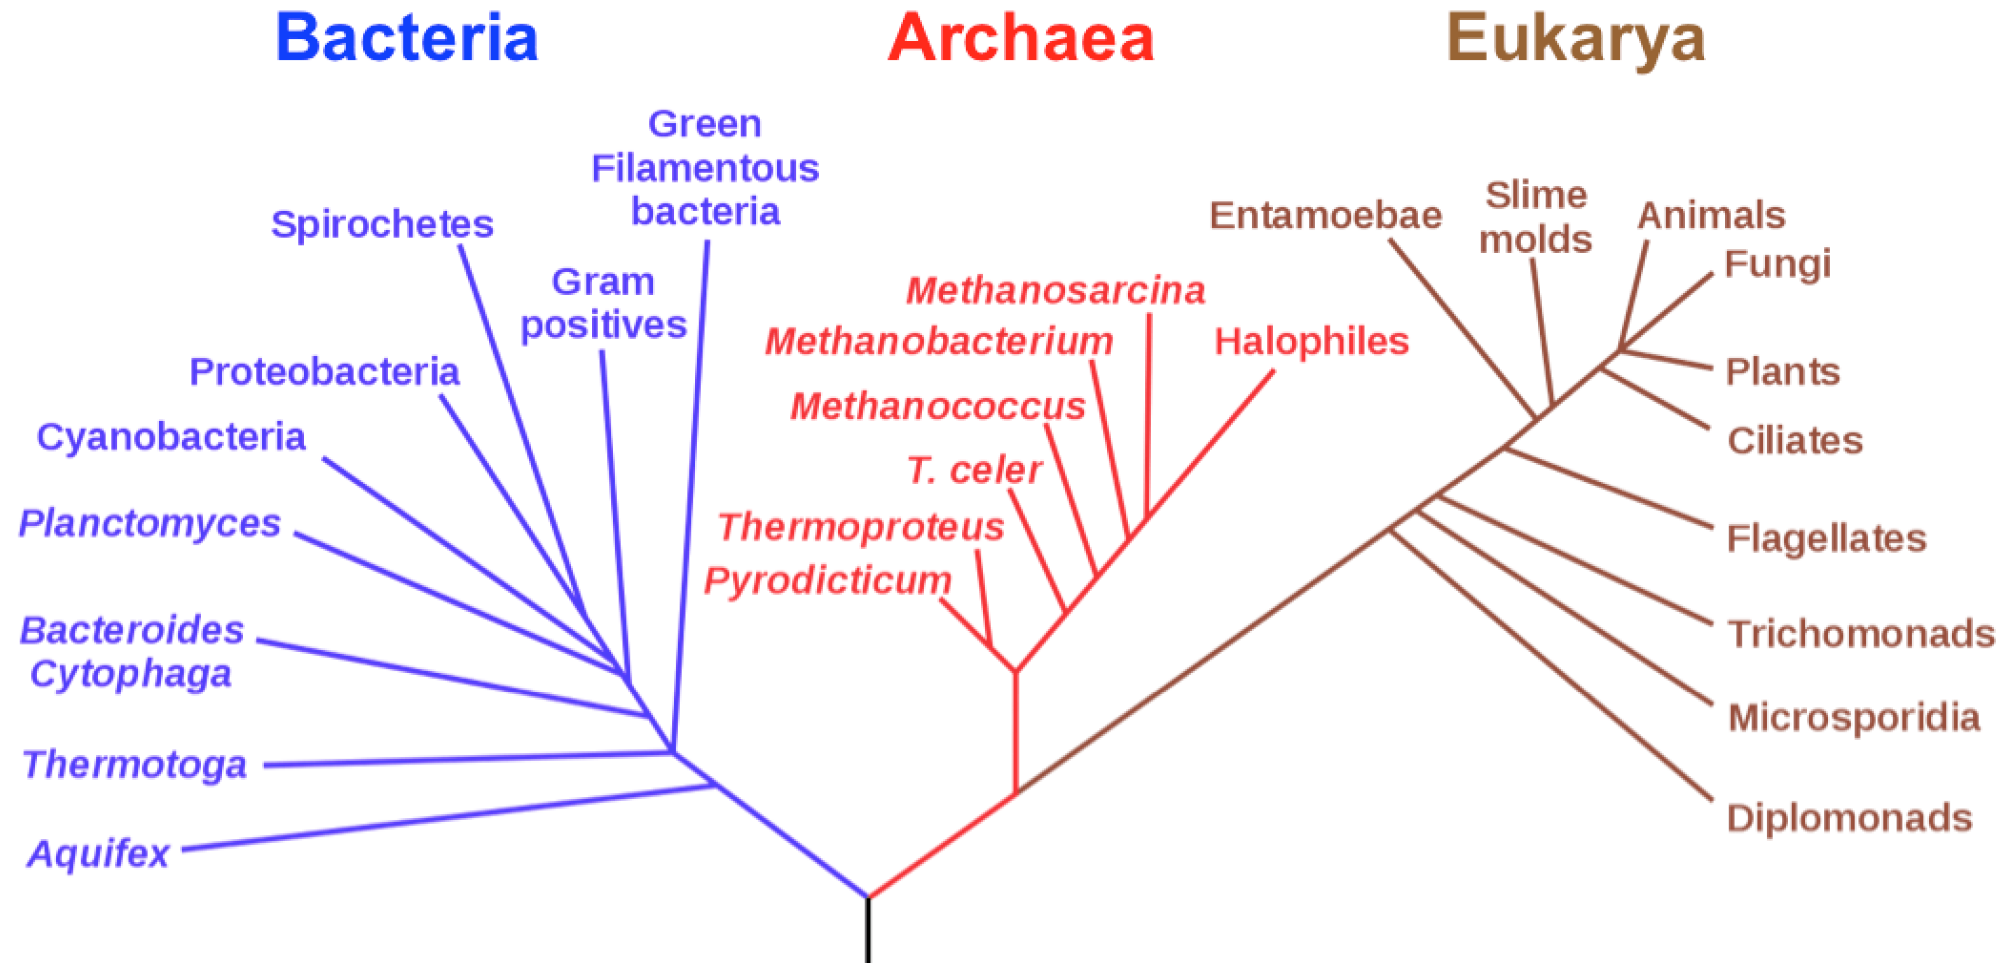

**S**pecies

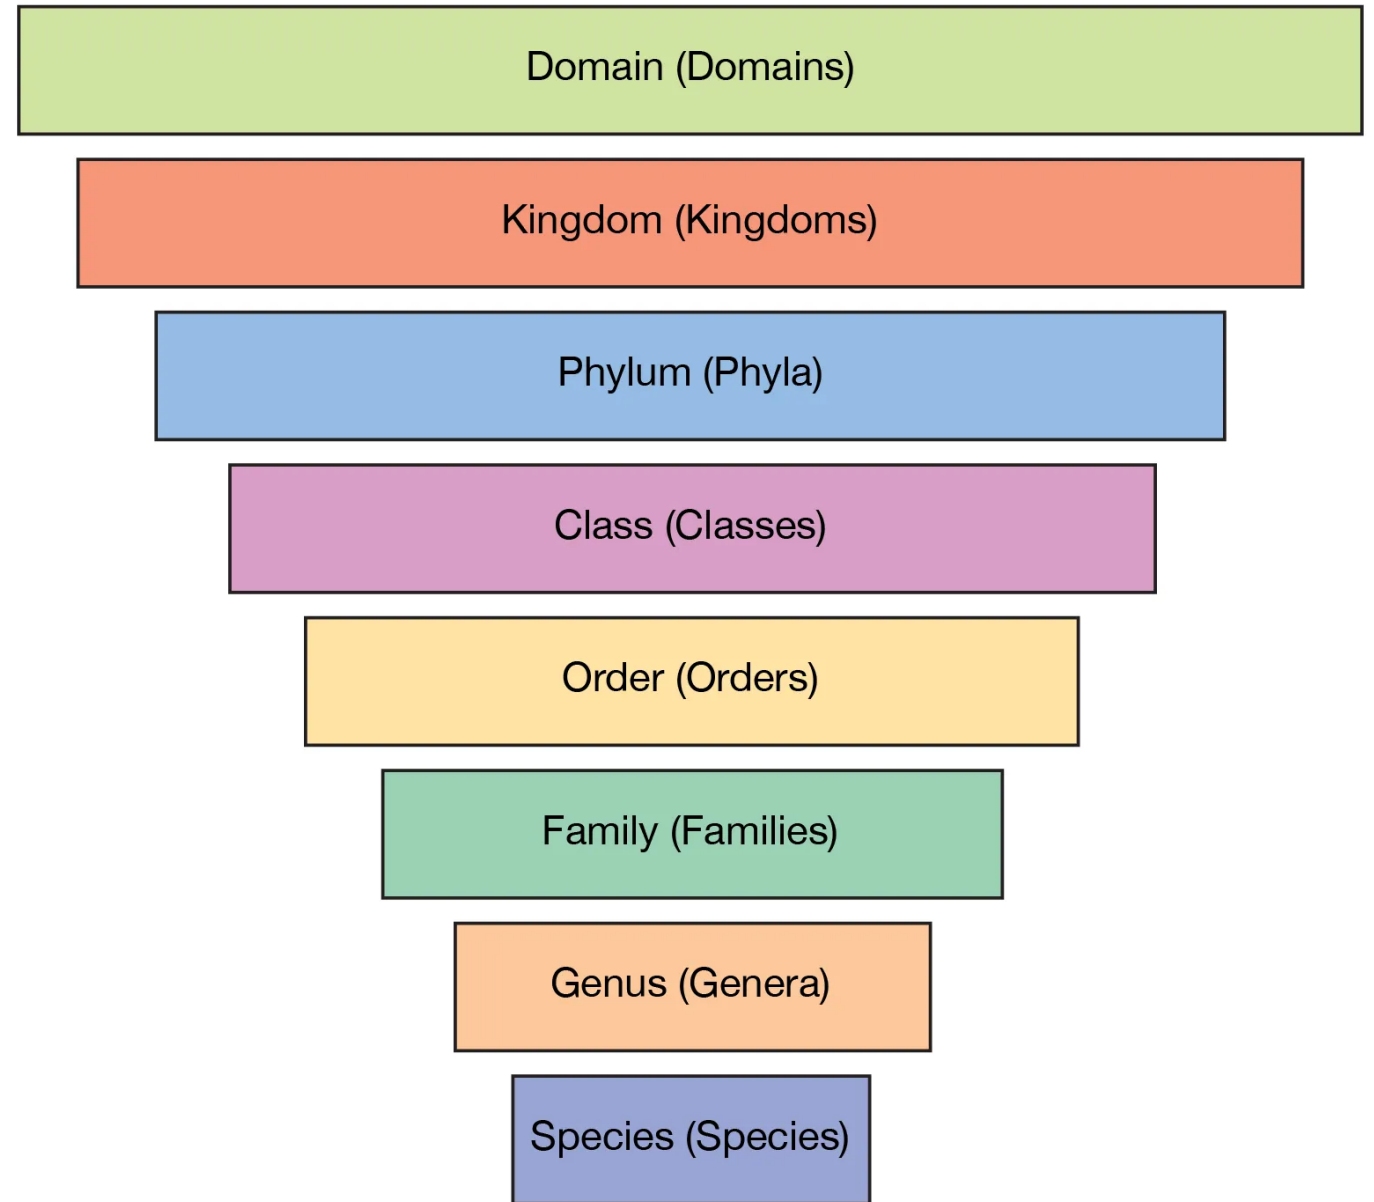

# THE THREE DOMAINS

# THE PHYLOGENETIC TREE OF LIFE

# TAXONOMY

Example Humans:

Kingdom

Animalia

Phylum

Chordata

Class

Mammalia

Order

Primates

Family

Hominidae

Genus

Homo

Species

Homo sapiens
